

Lab-3 Problem

Implement and Demonstrate Course registration Problem in Java/ Python

There are 10 students with unique registration number. There are 15 courses and 5 slots in a week. Each course has to be offered in 2 hours in a week i.e., one slot. Each student has to take 3 courses and max number of students per course is 5. Make an arrangement for the time table for 10 students. Display the time table for the 10 students.
